Introduction: The UIU Job Fair Management System is a comprehensive platform designed to facilitate the interaction between job seekers and potential stakeholders. The UIU Job Fair is not just an event; it's a platform where dreams meet reality, where aspirations are nurtured, and where futures are shaped. Our project aims to create a seamless online environment where job seekers can explore various job opportunities worldwide and apply for positions through a user-friendly interface. Additionally, tech companies can utilize our platform to efficiently recruit new talent by registering booths at UIU job fairs organized through our system.

Problem Background: The biggest problem for job seekers at job fairs is often the overwhelming nature of the event and the challenge of standing out among the crowd. The motivation behind the creation of this project stems from the challenges faced by both job seekers and employers in the traditional job fair setup. Traditional job fairs are often constrained by geographical limitations, making it difficult for job seekers to access opportunities beyond their immediate vicinity. Similarly, employers face challenges in reaching a diverse pool of candidates efficiently.

Moreover, the manual processes involved in job fairs, such as paperwork and registration queues, can be time-consuming and inefficient for both parties. Recognizing these challenges, we aim to leverage technology to overcome these limitations and create a more inclusive and accessible platform for job seekers and employers.

Aim and Objective: The primary aim of the UIU Job Fair Management System is to provide a centralized platform that connects job seekers with potential stakeholders on a global scale. Our objectives include:

- Facilitating seamless job search and application processes for job seekers.
- Providing a user-friendly interface for employers to register booths, post job vacancies, and recruit talent.
- Enhancing the efficiency of job fairs by digitizing processes such as registration and information dissemination.
- Promoting diversity and inclusivity by enabling access to job opportunities worldwide.
- Improving the overall experience for both job seekers and employers participating in UIU job fairs.

Existing System Analysis: Traditional job fair systems rely heavily on physical events held in specific locations, limiting access for job seekers and employers who cannot attend in person. These systems often involve manual registration processes, paper-based resumes, and limited interaction opportunities.

The existing systems lack scalability and accessibility, making it challenging for job seekers and employers to connect effectively. Additionally, the lack of centralized platforms results in fragmented job search experiences and inefficient recruitment processes.

Features of UIU Job Fair System:

1. **Login:** This feature enables users to securely log into the platform using their credentials, providing access to personalized functionalities based on their roles (job seeker, employer, admin).
2. **Dashboard:** The dashboard serves as the central hub where users land upon logging in. It provides a snapshot of relevant information such as recent activity, upcoming events, job recommendations, and notifications.

3. **User Profile:** Users can create and manage their profiles, including personal details, professional experiences, education, skills, and preferences. A comprehensive user profile enhances visibility and helps in connecting with relevant opportunities.
4. **Search:** The search feature allows users to discover job listings, companies, events, alumni, and other relevant content based on keywords, location, industry, and other filters.
5. **Job:** This feature presents detailed job listings, including job descriptions, requirements, benefits, and application instructions. Users can explore and apply for positions directly from the platform.
6. **Post:** Employers can post job vacancies, internship opportunities, and other career-related content to attract qualified candidates. Job postings are showcased to the relevant audience based on their preferences and qualifications.
7. **Friend:** Users can connect and network with other users within the platform, building professional relationships and expanding their professional circles.
8. **Group:** Groups provide a space for users with common interests, affiliations, or career goals to collaborate, share resources, and engage in discussions.
9. **Notifications:** This feature keeps users informed about important updates, such as new job postings, messages, friend requests, event reminders, and system notifications.
10. **Alumni Network:** The alumni network feature facilitates connections between current students and alumni of the university, providing opportunities for mentorship, networking, and career advice.
11. **Company Profile:** Employers can create and manage company profiles, showcasing their brand, culture, values, and job opportunities to attract top talent.

12. **Booth Registration:** Employers can register booths for upcoming job fairs organized by the university, providing them with a platform to interact with potential candidates and showcase their brand.

13. **Event Management:** Admins can create, manage, and promote job fairs, career workshops, networking events, and other professional development activities within the platform.

14. **Messaging:** Built-in messaging functionality allows users to communicate with each other privately, facilitating discussions related to job opportunities, networking, and collaboration.

15. **About Us:** This section provides information about the UIU job fair management system project, its mission, vision, team members, and contact details.

16. **Help and Support:** Users can access resources, FAQs, and contact support for assistance with using the platform, resolving issues, and addressing concerns.

17. **Feedback and Rating:** Users can provide feedback on their experience with the platform, job fairs, employers, and other users, helping to improve overall user satisfaction and system performance.

ER-Diagram: The er-diagram is given below:

Entities:

Login:

1. Login_id (Primary Key)
2. Password

User profile:

1. User_id
2. User_name(Composite)
 - First_name
 - Last_name
3. User_address (Composite)
 - Post_code
 - Road_no
 - Thana
 - District
4. Phone_no (Multivalued)
5. Birth_date
6. Age (Derived)
7. Religion
8. Gender

Job

1. Job_id (Primary Key)
2. Job_name
3. Job_type

Company profile:

1. Com_id (Primary Key)
2. Com_name
3. Com_type
4. Vacancy

Booth registration:

1. Booth_id (Primary Key)
2. Availability
3. Booked

Post:

1. Post_id (Primary Key)
2. Post_creator
3. Post_content
4. Status
5. Date

Friend:

1. Friend_user_id (Primary Key)
2. Status (Composite)
 - Request
 - Accept

Group:

1. Group_id (Primary Key)
2. Group_name
3. Group_type
4. Details
5. Member_count
6. Date

Alumni network:

1. Alumni_id (Primary key)
2. Alumni_name (Composite)
 - First_name
 - Last_name
3. Phone_no
4. Email
5. Current_position

Message:

1. Message_id (Primary Key)
2. Message_content
3. From
4. To
5. Time

About us:

1. Admin_id (Primary Key)
2. Admin_panel
3. Description

Relationship:

1. User_profile Have Login
2. User_profile Has Friend
3. Friend Conversation Message
4. User_profile Sent Message
5. User_profile Apply Job
6. Company_profile Hire for Job
7. Company_profile Booking Booth_reg.
8. About_us Control Booth_reg.
9. User_profile Give Post
10. Company_Profile Update Post
11. User_Profile Post Group
12. User_Profile Identity Alumni-network

Relational Schema: The relational schema is given below:

Task distribution: Md Shazzad Hossain Jiku will do the User Profile, Booth Registration, Post and About Us. Ananna Saha will be working with User Profile, Alumni Network, Group, Log in. Md. Ammar Hossain will be working with Company Profile, Job, Friend, Message, Log in.

Gantt Chart: In week 1, we will be trying to work with User Profile and Company Profile. In week 2, we will try to complete Alumni network, Booth Registration, Job. In week 3, we will be trying to work with Post, Friend, Group, Message. At the last, in week 4, we will try to complete Log in, About Us.

Conclusion: In conclusion, the UIU Job Fair Management System aims to revolutionize the traditional job fair experience by leveraging technology to create a more accessible, efficient, and inclusive platform for job seekers and employers worldwide. With its user-friendly interface, robust features, and scalable architecture, our project

endeavors to bridge the gap between talent and opportunity in the global job market.

Thank you
